

CPMP

CARNEY'S POINT METAL PROCESSING

NEWSLETTER

July 2007 – Second
Edition

Dear Friends,

We have great news! To meet the growing coating needs of our customers, we've successfully completed our 10,000 square foot expansion, which now provides a total of 35,000 square feet of facility work space. Not only has CPMP become the largest coating and blasting facility on the East Coast, but we've also achieved SSPC QP3 shop certification. What this means to our customers, is superior quality products & service that you've come to expect from CPMP. We continually strive to deliver performance that will meet and exceed our customer's expectations.

We look forward in welcoming our old and new customers to our newly expanded coating and blast facility.

Comments and suggestions are always welcome.

WHAT QP 3 CERTIFICATION MEANS TO OUR CUSTOMERS

QP 3 is a nationally recognized program that evaluates the practices of shop painting facilities in key areas of business. These standards are considered to be the MINIMUM level of service and quality for today's coatings industry.

The complex nature of coating systems, the specific conditions and surface preparation required by these systems, have made the QP 3 guidelines vital to the longevity of protective coatings applied in the shop.

To be certified by SSPC, industrial contractors must demonstrate competence in several key areas:

Management Procedures
Technical Capabilities
Quality Control
Health, Safety and Environmental Compliance

Contracting firms are evaluated through a series of submittals to SSPC, which describe business operations. Then an impartial, on-site audit is performed at the contractor's headquarters and shop locations to verify the information provided in the application submittals.

QP 3 Background:

SSPC issued the first version of the QP 3 standard in 1995, with the certification program being released in June of 1996.

SSPC revised its QP 3 procedure and administrative certification program in 1999 to coordinate its program with that of the American Institute of Steel Construction (AISC).

OUR MODERN NEW FACILITY ADDITION – ACCOMMODATES ANY SIZE PROJECT

CPMP has expanded their facility to 35,000 square feet. A 2nd blast room is now being added, which will measure 55 feet long by 19 feet wide and 20 feet high! We are now able to accommodate high production projects as well as a greater volume of large-scale projects. Carney's Point Metal Processing is not limited by the size or scope of the projects.

Large Scale – 60 Foot Mixing Support For Open-top Tank

Completed vessels

Overhead cranes make easy handling of large scale projects

High volume – H Brackets before coating application

High volume – H Brackets after coating application

Maneuvering large pieces into the state-of-the-art blast room

Remember, our facility operates in all seasons and weather.
